

PERGOLAS

Made in our factory we produce superb pergolas in the styles you need to enhance your design and provide excellent weather protection. The structures are normally made from green oak or tanalised softwood which we treat in a contract grade tinted preservative to prolong the its life and achieve the colours you need to work with your design.

They can be constructed to attach to an existing building or free stand for stand-alone restaurants on to patios or into soft ground. The roof covering can be polycarbonate or corrugated steel or a combination of the two where fire flues need to pass through and of course we will fit with all the required gutters and drainage.
